- 60 INCH (1500MM) COILED CORD SET
- SUPERVISED WIRING
- STAINLESS-STEEL FACEPLATE
- FLUSH OR SURFACE MOUNT RECEPTACLE

Description

EST Portable Fire Alarm Telephone Handsets and Wall Receptacles allow the fire fighters to communicate with the fire command center. They can be used by themselves or in addition to permanently installed fire fighter telephones throughout a building. Refer to literature sheet numbers 85001-0173 and 85001-0177 for details on EST 6702 series Permanent Telephone Stations.

The portable handsets plug-in to the strategically located and permanently installed receptacles throughout the building. Plugging in a portable telephone handset causes a "call-in" buzzer to sound, lights a "call-in" lamp, and lights an individual zone lamp in zoned systems, at the command center.

A storage panel for handsets can be provided at the street level control panel. Refer to applicable control panel literature for details.

PORTABLE TELEPHONE HANDSETS - Two models are available. Catalogue number 6700-0060 is Black. Catalogue number 6700-0061 is Red. Both models feature a 60 inch (1500mm) coiled cord complete with a male phone plug. The handset is made from durable ABS plastic.

PORTABLE HANDSET RECEPTACLE - The 6702-0200 Portable Handset Receptacle features a stainless-steel 1-gang faceplate. The receptacle is clearly marked "FIRE FIGHTERS TELEPHONE" in bilingual English and French languages using red lettering.

Supervised wiring connections between receptacles and the control panel are made to terminals on each wall receptacle. The receptacle flush mounts to any standard North-American 1-gang electrical box, or surface mounts to an EST 27193 series 1-gang Surface Backboxes. The 27193 series backboxes are available in a variety of factory finished colours.
